Career Objective

A Software Engineer passionate about learning and development. Eager to apply skills to tackle complex problems and maximize user efficiency. Excited to work with a larger team and contribute to organizational success.

Skills Summary

Programming Languages: Javascript(ES6), HTML, CSS, SCSS, Typescript, SQL, Solidity, Golang.

Database systems: MongoDB, PostgreSQL, mySql, Prisma ORM.

Library and Frameworks: Bootstrap, React, Node.js, Express.js, Bootstrap Studio, React Native, Redux, Next JS, Tailwind CSS, ThreeJS, Prisma, Nest JS, Github Actions.

Tools and Platforms: AWS, GitHub, Git, Bitbucket, Firebase, Restful API, CMS, Postman, Microsoft 365, Google Workspace, WordPress, Postmark, Jest, Playwrite.

DevOps & Cloud: Bitbucket Pipelines (CI/CD) , AWS EC2 & RDS Management , Nginx Configuration , PM2 (Process Management), Docker, Nginx(Reverse Proxy & Gzip), Certbot(SSL)

Personal Skills: Critical Thinking, Problem Solving, Great Communicator, Leadership.

Languages: English(Native), Igbo, Yoruba.

Interest: Psychology, Arts.

Certifications

- ITIL® v4 Foundation Certificate in IT Service Management
- Advanced React
- AWS Cloud Technical Essentials
- Microsoft 365 Ecosystem
- Software Development Processes and Methodologies
- Agile Software Development
- Lean Software Development

- Scrum Fundamentals Certified (SCF)

Experience

July 2025 - Present
Shecluded, Nigeria- *Lead Software Engineer(Hybrid)*

Company website: Shecluded - Home

As the **Lead Software Engineer** at **Shecluded**, a loan management company empowering women through accessible lending solutions, I lead the development of core financial technology infrastructure while managing a cross-functional development team.

Key Projects:

- **Loan Management Platforms (Full-Stack Web Application):** Architecting and developing a comprehensive loan application system from the ground up, enabling seamless loan origination, processing, and management for women entrepreneurs and professionals.
    - **Technical Stack:** React (Vite) and TypeScript for frontend, Express.js with TypeScript for backend, PostgreSQL database, Prisma ORM, AWS S3 and Cloudinary for secure document storage.
    - **API Development:** Designed robust RESTful APIs for loan applications, credit assessments, user authentication, and payment processing with Postman for comprehensive testing.
    - **Automated CI/CD Implementation:** Engineered and maintained automated deployment pipelines using **Bitbucket Pipelines** for the React frontends (Admin and User Sites) and the Node.js backend, enabling seamless, zero-downtime updates to **AWS EC2**.
    - **Database Migration**: Orchestrated a critical data transfer of customer records from **MySQL** to **PostgreSQL (AWS RDS)** using a custom Python script, ensuring data integrity and handling idempotency to prevent duplicate entries.
    - **Version Control:** Managing development workflow through Bitbucket with strategic branching and code review processes.
- **Corporate Website Maintenance:** Maintaining and enhancing the company's primary web presence at shecluded.com, ensuring optimal performance, security updates, and user experience improvements.

Leadership & Key Contributions:

- **Team Leadership:** Leading a multidisciplinary development team consisting of UI/UX designer and automation engineer, coordinating sprints and ensuring project deliverables meet quality standards and deadlines

- **Full-Stack Ownership:** Taking end-to-end responsibility for both frontend user interfaces and backend system architecture, ensuring seamless integration and optimal performance
- **Database Architecture:** Designing and optimizing PostgreSQL schemas for complex financial data relationships.
- **Code Quality:** Establishing development standards, conducting regular code reviews, and implementing automated testing strategies to maintain high system reliability

January 2025 - July 2025

SmartChain Limited, Nigeria- *Software Engineer(Remote)*

Company website: SmartChain - Home

As a **Software Engineer** at **SmartChain Limited**, I collaborate within a dynamic team to develop and enhance digital solutions, leveraging modern technologies for scalable and efficient applications.

Key Projects:

- **HealthXp (Mobile App):** Contributing to the development of **HealthXp**, a platform that improves **doctor-patient interactions**, enhancing accessibility to healthcare services.
- **Fundrayser (Web App):** Developing **Fundrayser**, a **global funding ecosystem** where users can **contribute towards goals**, fostering social impact and trade.
    - **Website:** Fundrayser
    - **Technical Stack:** Node.js/Express.js backend with MongoDB database, React frontend built with Vite for optimized performance
    - **API Development:** Designed and implemented RESTful APIs for user management, campaign creation, and payment processing
    - **Database Design:** Structured MongoDB schemas for efficient data management and scalable user interactions

Key Contributions:

- Working closely with cross-functional teams to design and implement core features.
- Ensuring seamless backend integration for optimal performance and user experience.
- Collaborating using **Microsoft Workspace** to streamline development, communication, and project management.
- Engaging in regular **code reviews** to maintain high-quality standards and improve system reliability.

October 2024 - March 2025

SoftCode, Nigeria- *Backend Developer(Remote)*

- Collaborated with a senior developer to define project requirements and timelines.
- Developed RESTful APIs using Nest.js, implementing best practices for code organization and security.
- Assisted in database design and integration, optimizing queries for performance with TypeORM.
- Implemented user authentication and authorization, ensuring secure access to protected resources.
- Contributed to the API documentation, improving the clarity and usability of the endpoints for frontend developers.
- Participated in regular code reviews, fostering a collaborative development environment and enhancing code quality.

August 2024 - September 2024

Shuttrd, Dubai- *Frontend Developer(contract - Remote)*

- Collaborating with a senior developer to define project requirements and timelines.
- Developed scalable, maintainable components using **Next.js** and **TypeScript**, contributing to a robust and user-friendly web application.
- Implemented **React Query** for state management and efficient data fetching, resulting in improved application performance.
- Customized UI components from **Material-UI (MUI)** and **shadcn/ui** to deliver a polished, responsive interface aligned with modern design standards.
- Contributed to code quality through **code reviews**, providing and incorporating feedback to enhance maintainability and readability.
- Developed reusable **custom hooks** to abstract complex logic, promoting code reusability and improving development efficiency.
- Implemented performance optimization techniques like **code splitting** and **lazy loading**, enhancing application responsiveness and load times.

March 2023 - March 2024

DinerPro, Lagos- *Frontend Developer(Remote)*

- Collaborating with a team of developers to define project requirements and timelines.
- Designed and developed a food management site using React and Redux as the team lead for frontend developers.
- Managed the app's data flow and state transitions using Redux states.
- Conducting code reviews and enforcing best practices for code quality.

September 2022 - November 2022

Freelance Job Bootstrap Studio (Kumasi Visa), India- *Frontend developer(Remote)*

- Built a responsive Web application using Bootstrap Studio.
- Built a user friendly interface to enable users to easily navigate the site to get instructions on how to apply for different Visas.
- Communicate and collaborate with a team that includes a project manager and a designer.

March 2022 - June 2022
Gold Tech Computer Institute, Ikeja Lagos- *Frontend developer*

- Built a quiz system with Vanilla JavaScript.
- Implemented a secure login system using PHP and Xampp, ensuring the confidentiality of user data.
- Collaborated and learnt from with a senior developer in using vanilla javascript and php to build projects.

Technical Projects

Acquisitions API (Node.js, Express, TypeScript)

Github Link: Acquisitions API Repository

Tech Stack: Node.js, Express.js, TypeScript, PostgreSQL (Neon Serverless), Drizzle ORM, JWT, bcrypt, Zod, Docker, Winston, Github Actions

Project Overview: A comprehensive RESTful API built for managing business acquisitions with enterprise-grade architecture, focusing on security, scalability, and maintainability with automated deployment pipelines.

Key Technical Features:

- **Modern Database Architecture:** Implemented PostgreSQL with Neon Serverless for cloud-native scalability and Drizzle ORM for type-safe database operations and automated migrations
- **Robust Authentication System:** Developed secure JWT-based authentication with bcrypt password hashing, automated session management, and role-based access control

- **Enterprise-Grade Security:** Integrated multiple security layers including Helmet for HTTP security headers, CORS for cross-origin resource sharing, and comprehensive request validation using Zod schemas
- **Development Excellence:** Established comprehensive development workflow with ESLint/Prettier for code quality, Winston for structured logging, and Morgan for HTTP request monitoring
- **Production-Ready Infrastructure:** Configured Docker containerization with separate development and production environments, automated database migrations, and cloud deployment capabilities
- **Comprehensive Testing Suite:** Implemented Jest and Supertest for API endpoint testing with coverage reporting and automated test workflows

API Endpoints:

- **Authentication Flow:** Complete user registration, login, and logout with secure token management
- **Database Operations:** Full CRUD operations with optimized queries and transaction management
- **Health Monitoring:** Database connectivity testing and system health endpoints

Development Operations:

- **Containerized Deployment:** Docker Compose configurations for both development and production environments
- **Automated Workflows:** Database migration scripts, code formatting, linting, and testing automation
- **Monitoring & Logging:** Structured logging system with Winston for comprehensive application monitoring and debugging

This project demonstrates my proficiency in building scalable backend systems with modern development practices, emphasizing security, maintainability, and enterprise-level architecture patterns.

Cloud Infrastructure and Deployment (Shecluded)

Role: Software Developer

Tech Stack: AWS EC2, AWS RDS, Nginx, Bitbucket Pipelines, PM2, Python.

Key Achievement: Transformed manual deployment processes into fully automated CI/CD pipelines using Bitbucket Pipelines and rsync, reducing deployment time by approximately 80%. Architected a secure gateway using Nginx reverse proxies and automated SSL management for multiple production subdomains, ensuring 99.9% uptime and encrypted traffic for web operations.

Education

November 2014 - March 2023

Federal University of Technology, Akure - *BTech, Biochemistry*
